Connect the app to OBS and Twitch

The quick guide: 8 steps, about 5 minutes. You only do it once, the app remembers everything.

1. OBS: turn on the connection and copy the password
2. Twitch: create your Client ID and sign in
3. If something goes wrong: quick fixes

You need: OBS Studio 28 or newer, your Twitch account, and Mikatox Stream Hub open on the same PC as OBS.
The pictures are illustrations of the screens: the labels are the real ones from OBS, Twitch and the app, but the exact look may vary with your version. The app itself is in French: its buttons are shown in French with the English meaning in brackets.

PART 1 OBS

OBS already has everything it needs (obs-websocket is built in since OBS 28). You just turn it on.

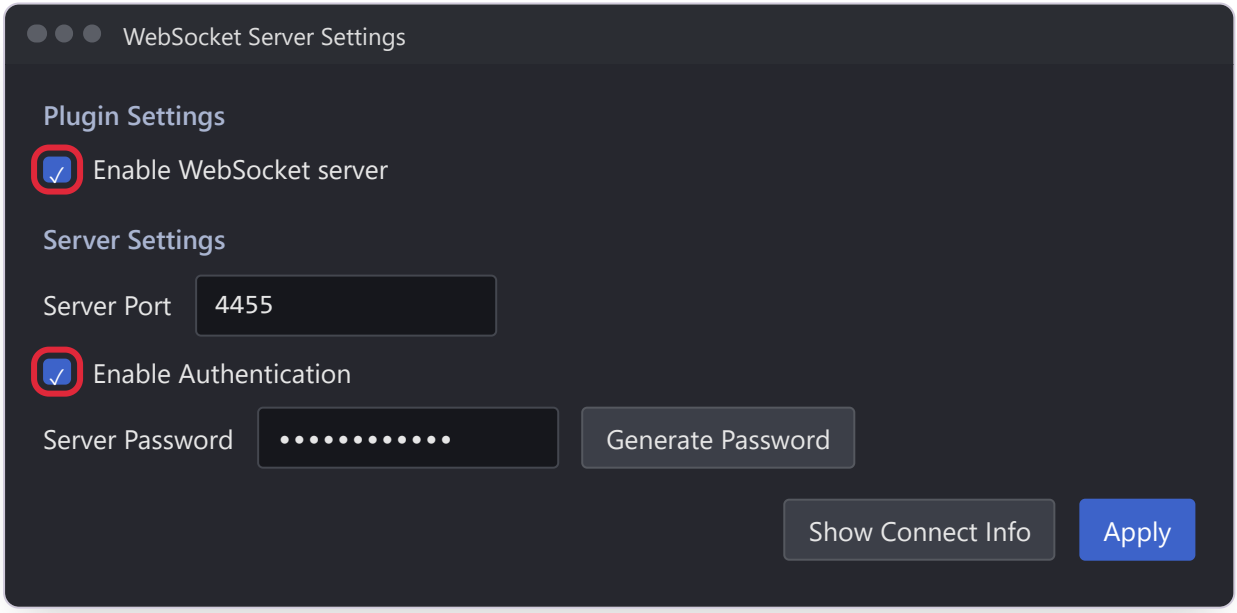

1 Open the Tools menu

In OBS, at the top: **Tools** → **WebSocket Server Settings**.

2 Turn on the server and authentication

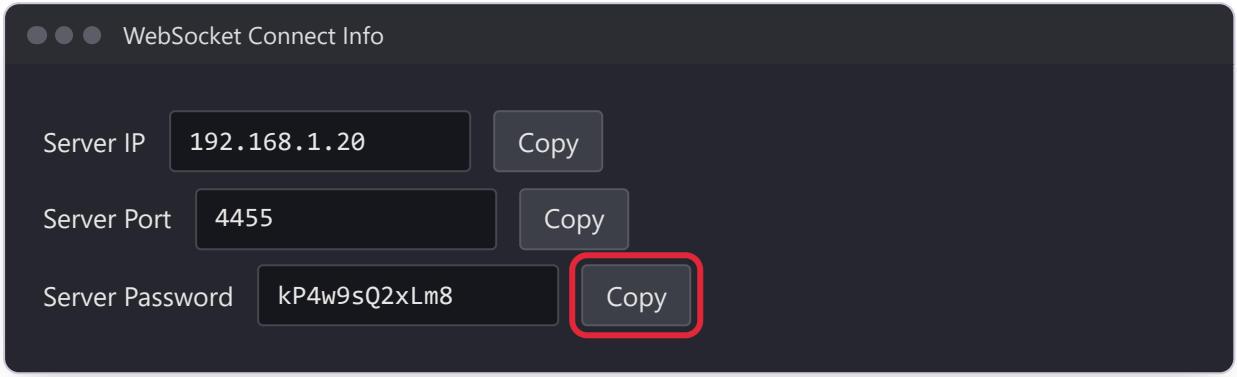

Tick **Enable WebSocket server** and **Enable Authentication**. Leave the port on **4455**. If there is no password yet, click **Generate Password**, then **Apply**.

PART 1 OBS (continued)

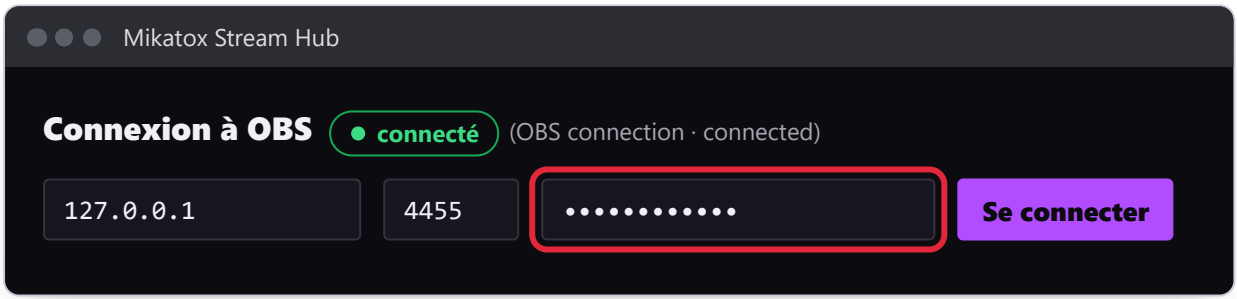

3 Copy the password

Click **Show Connect Info**, then the **Copy** button next to the password.

4 Paste it into Stream Hub

In the app: section **OBS & santé** (OBS & health) → **OBS**. Address **127.0.0.1**, port **4455**, paste the password, then **Se connecter** (Connect). The badge turns green: done, the app will remember it.

Tip: Stream Hub reconnects by itself when you close and reopen OBS. Nothing to redo.

PART 2 Twitch

If the app's welcome screen directly shows **Se connecter avec Twitch** (Sign in with Twitch) with no "Client ID" field, your version already has one: skip to step 8.

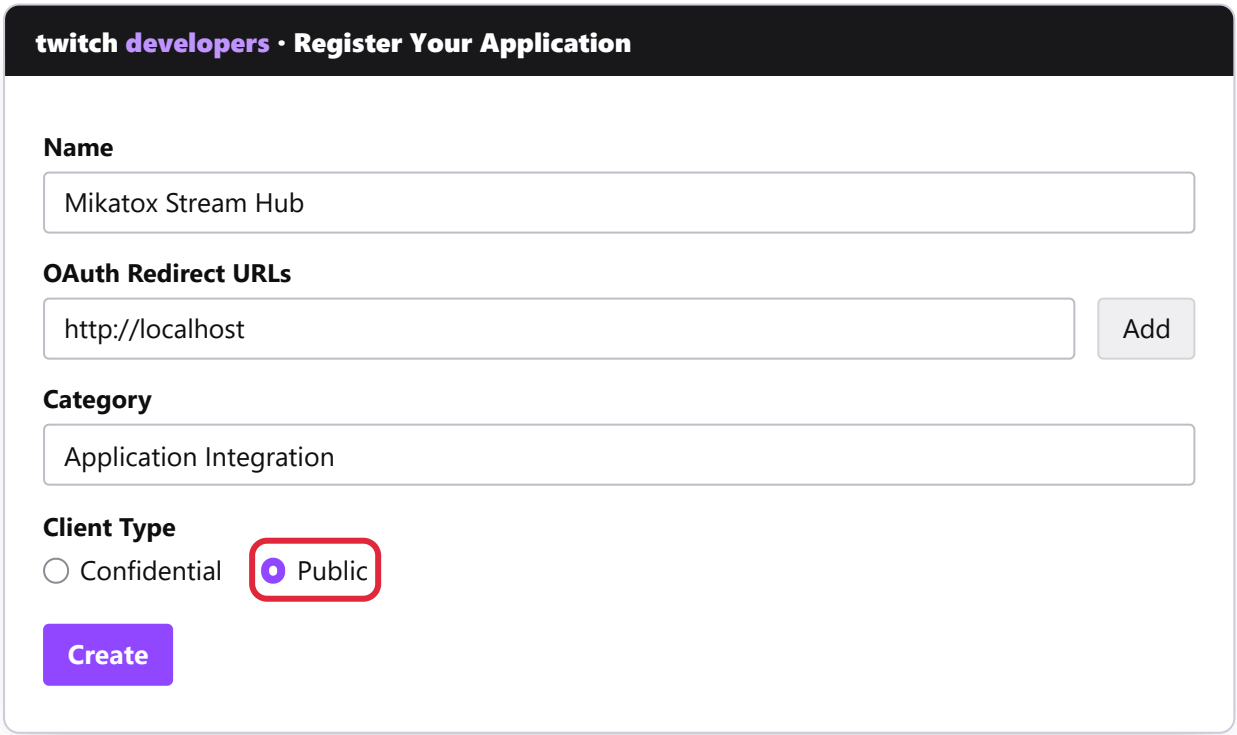

5 Open the Twitch console

On the app's welcome screen, click **Je n'ai pas de Client ID** (I don't have a Client ID), then **Ouvrir la console Twitch Developers** (Open the Twitch Developers console). It opens in your browser: sign in with your Twitch account, then click **Register Your Application**.

> **Before you start:** Twitch requires **two-factor authentication (2FA)** on your account to create an application. If you see "user must have two factor auth enabled", turn it on first: Twitch › Settings › Security and Privacy › Two-Factor Authentication (SMS code or authenticator app). Keep your backup codes safe, then come back here.

6 Fill in the form, then Create

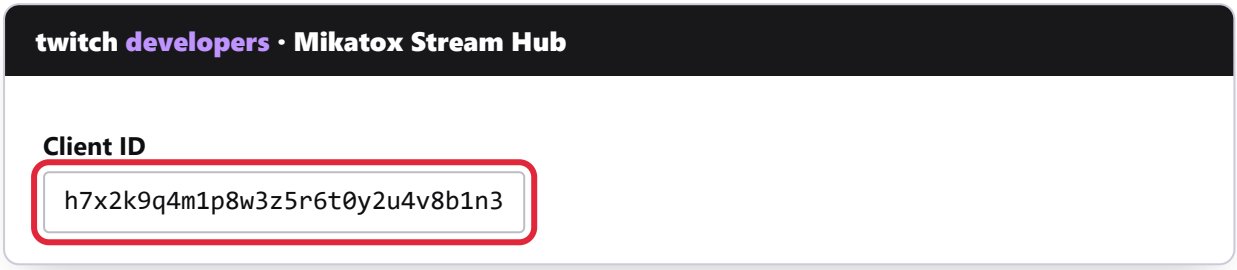

Name: **Mikatox Stream Hub** (if it is taken, add your username). OAuth Redirect URL: **http://localhost**, then **Add**. Category: **Application Integration**. Client Type: **Public** (important). Only **one** URL line must remain: if an empty second line shows "Redirect URLs must use HTTPS", click its **Remove** button.

PART 2 Twitch (continued)

7 Copy the Client ID

In your list of applications, click **Manage**. Copy the **Client ID**. It is not a secret: no need for "New Secret".

8 Sign in from the app

Paste the ID into **Client ID Twitch** and click **Se connecter avec Twitch** (Sign in with Twitch). A Twitch window opens and the app shows a code: check it is the same, then click **Authorize**. The window closes by itself and your chat and alerts start coming in.

TROUBLESHOOTING

Quick fixes

"OBS injoignable" (OBS unreachable)

Is OBS open? Is the WebSocket server ticked (step 2)? Are the app and OBS on the same PC? Is the port 4455 on both sides?

Password rejected

Copy it again with OBS's Copy button (step 3), with no extra space. If you clicked "Generate Password", the old one no longer works.

"user must have two factor auth enabled"

Twitch requires two-factor authentication to create an application. Turn it on in Twitch › Settings › Security and Privacy, then redo step 6.

"Redirect URLs must use HTTPS"

An empty URL line was left under "http://localhost": click its Remove button, then Create.

"Confidential" client type

On dev.twitch.tv: Manage your application → Client Type: Public → Save. Then sign in again in the app.

Application name already taken

Twitch refuses a name that is already used: add your username, for example "Mikatox Stream Hub MyName".

The code does not show up

Click "Rouvrir la fenêtre Twitch" (Reopen the Twitch window) in the app, or "Annuler" (Cancel) and redo step 8.

Behind a VPN

No special setting: the chat reconnects by itself. The tablet, though, must be on the same Wi-Fi as the PC.

Still stuck? Come to the Discord: discord.gg/A5sdHYPCWE. Never share your OBS password or a Twitch "secret" in public.
